

Investment Proposal

A modular, month-by-month engagement to own Nairobi's digital hospitality landscape, priced in KES. Guests searching up hospitality on Google, ChatGPT, or TripAdvisor are finding competitors instead of Holiday Inn. Our audit scored the property at 53/100, below the threshold where digital visibility actively drives bookings.

The parked domain problem. holidayinnnairobi.com currently shows a GoDaddy parking page. When a guest types your hotel name into a browser, ready to book, they hit a blank page. That guest goes to Booking.com, where you pay 15–22% commission. A branded microsite on this domain captures direct traffic, serves as the source search engines and AI cite, and converts lookers into bookers. This is the foundation everything else builds on.

25	30	35	62	68	82
Owned Web	AI Search	Meta & Paid	GBP & Local	Social	Reviews

To discuss: Our ROI calculations below use an estimated KES 12M/month revenue base. We will need to confirm this during our meeting, the actual figure will sharpen the ROI projections and may affect which tier makes the most sense.

7 Monthly Modules

Each module is a self-contained workstream. Our role is to build, maintain, and integrate, we do not run your social media, manage your ad campaigns, or create your content. We build the digital infrastructure that makes all of those efforts convert. The Website Revival (one-time) is separate, any tier can add it.

Module 01: Google Business & Local Search — KES 2,000/mo.

Your GBP scored 62, fair but fragile. 5 postcodes and 2 phone sets across citations suppress your map ranking.

- NAP audit & standardise across all citations
- GBP optimisation: categories, attributes, description
- Weekly Google Posts with offers & events
- Q&A management: pre-populate & respond
- Photo/video upload cadence (4+/month)
- Local citation building across OTAs
- Monthly map ranking tracking
- Competitor GBP monitoring

Why monthly: GBP algorithms recalculate weekly. A dormant profile loses 2–5 positions within 60 days.

To discuss: TripAdvisor listing claim status, we believe it may be unclaimed. We will need login credentials or ownership verification. We also need access to the GBP listing (owner/editor role).

Module 02: Reputation & Review Intelligence — KES 1,500/mo.

Strong foundation (4.6 Google/227, 4.8 TripAdvisor/278, #12 Nairobi), but no systematic process. TripAdvisor possibly unclaimed. Facebook zero visible reviews.

- TripAdvisor claim & full optimisation
- Review response protocol: all platforms, 24–48hr
- Post-stay review request workflow
- Monthly sentiment analysis & trend report
- Negative review escalation protocol
- Review schema for rich snippets on owned site
- Monthly review velocity vs competitors
- Quarterly reputation strategy review

Why monthly: Reviews are a living signal. One unmanaged negative review can undo months of goodwill.

To discuss: Post-stay review workflow depends on existing systems, do you capture guest emails at check-in? PMS or email marketing platform in place?

Module 03: SEO & Content Authority — KES 6,500/mo.

SEO is the compounding engine. When someone searches "hotel near Two Rivers Mall Nairobi" or "conference hotels Westlands," you should appear on a page you control, not just IHG.com.

- Technical audit & monthly crawl fixes
- Keyword research: hotel, conference, dining verticals
- 4 blog posts/month targeting high-intent queries
- Hub-and-spoke internal linking architecture
- 4–8 quality backlinks/month
- Schema: Hotel, LocalBusiness, FAQ, Event
- Website maintenance: security, uptime, perf
- Quarterly competitor content gap analysis
- Monthly ranking & traffic report (KES ROI)

Why monthly: SEO compounds. Month 1 builds foundation, month 3 shows movement, month 6+ is where the flywheel accelerates. This module also covers ongoing website maintenance.

To discuss: Content volume (4 posts/month) and backlink targets are starting recommendations, can be scaled. Does the hotel have existing photography, or will we coordinate shoots?

Module 04: Social Media Integration — KES 3,000/mo.

You have 26K Facebook followers, a significant asset. This module integrates your social presence into the website so traffic flows both ways. We do not create content or post on your behalf.

- Social feed integration (live Facebook/Instagram on site)
- Open Graph & Twitter Card meta tags for rich sharing
- Social share buttons on rooms, offers, blog content
- WhatsApp Business chat widget integration
- Social proof widget: live review/testimonial display
- UTM tracking for social → website traffic
- Monthly social-to-website traffic report

Why monthly: Social platforms change their embed APIs, sharing behaviours, and pixel requirements regularly. Monthly maintenance keeps integrations working.

To discuss: Which social platforms are most active? We assumed Facebook and Instagram, but LinkedIn or TikTok may matter for your audience. We will map this together.

Module 05: AI Search Readiness — KES 6,000/mo.

Scored 30/100. When guests ask ChatGPT, Perplexity, or Google AI "best hotel near Two Rivers Mall?" the AI pulls from structured data, reviews, and web content. Without active optimisation, you are invisible.

- AI citation audit: ChatGPT, Perplexity, Gemini
- Structured data optimisation (JSON-LD)
- FAQ & entity markup for conversational queries
- Content formatting for passage extraction
- Brand mention monitoring (monthly)
- Competitor AI visibility benchmarking
- AI-ready content templates for new pages
- Quarterly AI search trend report

Why monthly: AI models retrain on fresh data continuously. Content that is AI-ready today may not be tomorrow if competitors publish fresher alternatives.

To discuss: Which AI platforms do your guests actually use? We assumed ChatGPT, Perplexity, and Google AI Overviews, but corporate audiences may warrant LinkedIn AI or industry platforms.

Module 06: Paid Ads Conversion Infrastructure — KES 5,000/mo.

You already have ads running, that is how we found you. The problem is what happens after the click. This module builds the conversion infrastructure: landing pages, tracking, funnel optimisation. We do not run your campaigns.

- Conversion-optimised landing pages on owned site
- Meta Pixel & Conversions API integration
- Booking funnel tracking (click → booking confirmation)
- A/B testing: landing page variants, CTA placement
- UTM structure & campaign attribution setup
- Bounce rate & drop-off analysis (monthly)
- Landing page refresh aligned with campaign cycles
- Monthly conversion rate report

Why monthly: Ad campaigns change: new offers, audiences, creatives. Each needs a matching landing experience. One mismatched page can waste weeks of ad spend.

To discuss: Since you already have an ads team, this module makes their work convert, not replacing them. We will want to understand their campaign calendar for alignment.

Module 07: Analytics & Strategic Intelligence — KES 5,000/mo.

Every module generates data. This module turns it into decisions. Without unified analytics, you cannot tell which channel drives bookings or where to allocate budget.

- GA4 setup with enhanced measurement
- Looker Studio: SEO, paid, executive dashboards
- Booking conversion tracking (M-Pesa / IHG)
- Monthly report: all modules, one document
- Quarterly strategy review & pivots
- Competitor benchmarking: 3-month rolling
- Attribution: which channels drive direct bookings

Why monthly: Reporting is the accountability mechanism. Monthly reports tie every shilling to a metric and surface anomalies before they become expensive problems.

To discuss: We assumed GA4 + Looker Studio. If you already have analytics in place, we build on top. We will also align on what success looks like: direct bookings, traffic, review growth, or all of the above.

A note on ads: We are a websites company, our specialty is what happens after the click, not the click itself. Module 06 covers the conversion infrastructure that makes your existing ad spend work harder. We do not manage ad campaigns, set budgets, or buy media.

Engagement Tiers

Modules can be mixed and matched. All prices are monthly fees in KES. The Website Revival (one-time) is available as an add-on to any tier.

Module	Essential	Growth (Recommended)	Premium
01 — GBP & Local Search	✓	✓	✓
02 — Reputation & Reviews	✓	✓	✓
03 — SEO & Content	✓	✓	✓
04 — Social Integration	—	—	✓
05 — AI Search Readiness	—	✓	✓
06 — Meta Ads Integration	—	✓	✓
07 — Analytics & Reporting	—	—	✓
Monthly Total (KES)	10,000	18,000	29,000

Website Revival (one-time): KES 13,000* — available as an add-on to any tier. Revives holidayinnnairobi.com from its parked state into a branded microsite. Ongoing site maintenance is included in Module 03.

*Final Website Revival. Pricing will depend on whether the domain has an existing website or requires a build from scratch.

To discuss: These tiers are starting points. Modules can be mixed, scaled, or sequenced. We might start with Essential to fix critical gaps, then step up to Growth. No penalty for adjusting.

Market Context

This covers what comparable services cost in Kenya, benchmarked against current Kenyan agency rates (2025–2026). Our pricing sits 70% below market rate, it is a lean operation with minimal overhead.

Service	Market Range (KES/mo.)	Our Price
Full SEO retainer	20,000 – 40,000	6,500
GBP integration	6,000 – 10,000	2,000
Reputation / review integration	5,000 – 8,000	1,500
Social media integration	10,000 – 15,000	3,000
Ads conversion infrastructure	15,000 – 25,000	5,000
AI search integration	12,000 – 25,000	6,000
Analytics & reporting	12,000 – 20,000	5,000
Website revival (one-time)	40,000 – 80,000	13,000*

Return on Investment (ROI)

Cost of inaction	Conservative ROI scenario
✗ OTA commissions: 15–22% of every Booking.com / Expedia reservation ✗ Estimated 40–60% of bookings currently via OTAs ✗ On KES 12M revenue: OTA fees cost KES 720K–1.58M/month ✗ Parked domain = zero capture of direct searchers ✗ AI invisibility = excluded from fastest-growing channel	✓ Growth tier (KES 18K/mo) targets 10–15% shift from OTAs to direct ✓ On KES 12M revenue: KES 1.2M–1.8M shifted to direct ✓ OTA commission saved: KES 180K–396K/month ✓ Net return on KES 18K investment: 10–22× monthly ✓ Break-even: within first month ✓ Compounding: organic SEO & reviews reduce CAC over time

Even the most conservative scenario, shifting just 10% of OTA bookings to direct, returns 10× the Growth tier investment, that is a 1,000% return. At 15% shift, the retainer pays for itself 22× over, that is a 2,200% return on investment.

At KES 18,000/month, which is less than the cost of a single OTA commission on a 3-night stay, you are not adding an expense, you are redirecting money you are already paying to intermediaries back into your own visibility.

All prices in KES. Monthly retainers are month-to-month with 30-day written notice.
Prepared August 2026 | Confidential: For Holiday Inn Nairobi evaluation only.

To discuss: We have structured this as month-to-month because we believe the work should earn your continuation every 30 days. If you prefer a longer commitment (e.g., 3 or 6 months), we can discuss a fixed-term arrangement, often with a modest rate adjustment.
